

Amy Hirsch- Deputy Director; Warren County Emergency Services Coordinator

LEPC

- The Tier II reported chemicals within Warren County has been updated as follows:
 - Removed- Aluminum Chloride 12042-91-0; Potassium Chloride 007447-40-7
 - Added- Argon 7440371; Carbon Dioxide 124389
- The Adirondack HAZMAT Consortium includes: Clinton, Essex, Franklin, Hamilton, St. Lawrence, Warren and Washington Counties. We have been awarded a grant to produce a hazardous material commodity flow study this year. We have another grant to put on an exercise next year.
- OES invited to join the State at a truck stop to gain a better understanding of what hazardous materials are passing through on I-87 for the consortium's Commodity Flow Study. There are hazardous materials passing through than we didn't realize, including plutonium and titanium. Previously we have not considered these chemicals to be much of a threat to our area as they now appear to be. This will be taken into consideration when planning.
